Course Code: ITA0330
Course Name: Mobile Computing

5 Experiment Name: Mobile Application Wireframe Design Using Figma

Aim

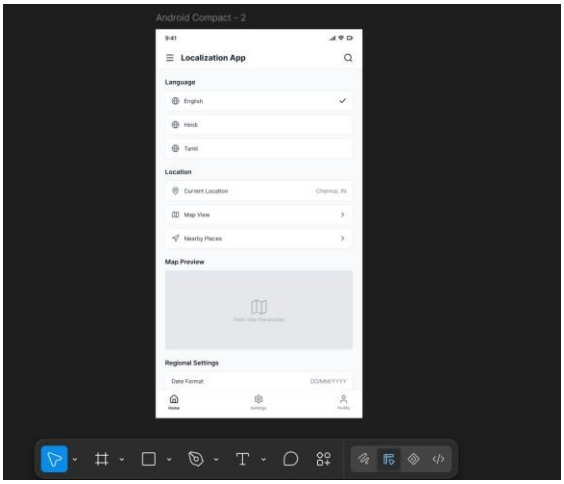

To design a wireframe for a mobile application using Figma that incorporates localization features such as language selection, regional settings, and location-based services.

Procedure

1. Open Figma and create a new Design file.
2. Select a mobile phone frame.
3. Design a home screen with a title, menu, and navigation buttons.
4. Add a language selection option with choices such as English, Hindi, and Tamil.
5. Add location-based features such as current location, map, and nearby places.
6. Include regional settings such as date format, time format, and currency.
7. Use simple rectangles, text, and icons to create the wireframe.
8. Use the Prototype tab to connect the screens and test navigation.

Save the design

Output:

Result:

A mobile application wireframe was designed in Figma with localization features, including language selection, regional settings, and location-based services.
